Subject Index

Acrylonitrile, copolymer with methylthiirane, thermal transformation in DMF 307
Activation energy, apparent, of evaporation of alkali metal nitrates 406
– –, isoconversional method for determination of 95
– – of thermal decomposition of polyurethane elastomers 371
– –, – – of thallium oxalates 156
– –, – degradation of polyisobuthylene 379
Alkali metal nitrates, evaporation of, kinetics 401
– – nitrites, evaporation of, kinetics 401
Aluminium foils, for capacitors, DTG, TG 317
Amitriptyline hydrochloride, thermal behaviour 57
Ammonium compounds, binary, inorganic, DSC 275
– hydrogen sulfate, DSC 278
– nitrate, DTA, reproducibility of 37
– paramolybdate, thermal decomposition 125
– perchlorate, thermal ignition 43
– sulfamate, DSC 277
– sulfate, DSC 278
Antipyrenes, effect on thermal decomposition of polyurethanes 367
Application of thermal analysis, review 427

Base-line, in DTA, formula for 113
Bibliography 227, 445
Binary ammonium compounds, DSC 275

Calcium nitrate tetrahydrate, dehydration 409, 419
Catalysts, of graphite–manganese oxide mixtures, DTA 69
–, of nickel oxide–vanadium pentoxide, reduction kinetics of 77
–, temperature programmed desorption from 391
Catalytic effect of clay on combustion of crude oil 18
Chitin from lobster shell, DTA, DTG, TG 259
Clay, effect of, on combustion of crude oil 17
Clomipramine hydrochloride, thermal behaviour 57
Cobalt(II) cyanopyridine complexes, thermal study 3
CODATA, task and endeavor in thermodynamics 207
Coking of crude oil, DSC 33
Combustion on of crude oil, effect of clay on 17
Complexes of cobalt(II) with cyanopyridine, thermal study of 3

Complexes, of copper oxalate with amines, thermal decomposition 263
–, of poly(acid amides) with aprotic solvents, MTA 333
Copper oxalate and complexes of, with amines, thermal decomposition 263
Crude oil combustion, effect of clay on 17
Cyanopyridine derivatives, complexes with cobalt(II), thermal study 3

Dehydration, of calcium nitrate tetrahydrate 409, 419
Derivative thermogravimetry, of aluminium foils for capacitors 317
– –, of ammonium paramolybdate 130
– –, of calcium nitrate tetrahydrate 410
– –, of copper oxalate hemihydrate 266
– –, of crude oil 20
– –, of graphite–mangenese oxide catalysts 72
– –, of lobster shell 258
– –, modified, study of perlites 341
– –, of nickel(II) rhodanide–pyridine mixed complexes 361
– –, of polyurethane elastomers 370
– –, of sedatives 61
– –, of sodium nitrate–diboron trioxide mixture 106
Desorption, temperature programmed, for determination of kinetic parameters 391
Diboron trioxide–sodium nitrate–silica mixtures, reactions of 103
Differential scanning calorimetry, of ammonium hydrogen sulfate 278
– – –, – surface 277
– – –, – sulfate 278
– – –, of binary inorganic ammonium compounds 275
– – –, of combustion of crude oil 32
– – –, of elastin–fatty acid complexes 290
– – –, of polymers containing fire retardants 159
– – –, of thiourea 142
– – –, of uranyl acetate dihydrate–thiourea system 143
Differential thermal analysis, of ammonium nitrate, reproducibility 40
– – –, – paramolybdate 130
– – –, – perchlorate 46
– – –, of calcium nitrate tetrahydrate 410, 421
– – –, of cellulose 46
– – –, of cobalt(II) cyanopyridine complexes 5
– – –, computation formula of 113
– – –, of copper oxalate hemihydrate 266
– – –, equation of the base-line 113
– – –, of graphite–manganese oxide catalysts 72
– – –, of lobster shell 258
– – –, of mixed monolayers of hydrocarbon and alcohol 293
– – –, modification for study of oxidation of catalysts 69
– – –, of nickel(II) rhodanide–pyridine mixed complexes 361
– – –, of peat 441
– – –, of perlites 343
– – –, of polyethylene, for study of oxidative stability 430
– – –, of polymers containing fire retardants 159
– – –, of polyurethane elastomers 370
– – –, the role of reference material in 113

Differential thermal analysis, of sedatives 61
– – –, of sodium nitrate–diboron trioxide–silica mixtures 110
– – –, of tetramethylammonium perchlorate 46
– – –, of thermal ignition of two-component systems 51
– – –, theory of, heat exchange between specimen and reference cell 301
Doyle's approximation, correction of 95

Elastin–fatty acid complexes, thermal properties 287
Electronic spectra of cobalt(II) cyanopyridine complexes 11
– –, of nickel(II) mixed complexes 363
Epoxy binder, dependence of fixed conversion temperature on heating 330
Events 255, 473

Factor-jump thermogravimetry, for study of poly(isobuthylene) 379
Fatty acid–elastin complexes, thermal properties 287
Fire retardants, polymers treated with, DTA, DSC studies, review 159
Fossil fuels, characterization by thermal analysis 435
Friedel–Crafts alkylation, followed with thermokinetic reactor 218
Fuel oils, characterization by thermal analysis 435
–, -rich compounds, thermal ignition of ammonium perchlorate in the presence of 43
Fuels, application of thermal analysis for study of 431

Granular additives, effect on combustion of crude oil 23
Graphite–manganese oxide catalysts, DTA 69

Heat exchange between specimen and reference cell, with DTA 301
High-temperature reactions of sodium nitrate–diboron trioxide–silica mixtures 103
Hyperbolic temperature programme, for deammoniation of zeolites 353

Imipramin hydrochloride, thermal behaviour 57
Infrared spectra, of cobalt(II) cyanopyridine complexes 12
– –, of components of lobster shell 261
– –, of nickel(II) mixed complexes 363
– –, of polyurethane elastomers 370
Instrument, for measurement of rate of heat evolution 215
Invariant values, of kinetic parameters, method of finding of 89
Isoconversional method for determination of energy of activation 95

Kinetic equation for one-stage chemical reaction, applicability for non-isothermal destruction processes 325
– parameters, determination by means of temperature programmed desorption 391
– –, method of finding invariant values of 89
Kinetics of combustion of crude oil 28
–, of deammoniation of zeolites 353
–, of non-isothermal transformations 151
–, of redcution, of nickel oxide–vanadium pentoxide catalysts 77

Lithium nitrate, evaporation rate, temperature dependence of 403
Lobster shell, thermal analysis of 257

Magnetic data of cobalt(II) cyanopyridine complexes 10
– moments of nickel(II) mixed complexes 363
Mass-spectrometric analysis, thermal decomposition of ammonium paramolybdate 129
– thermal analysis, of solid-phase cyclodehydration of films 333
Medicaments, thermal study of 57
Melting point, of ammonium sulfate–ammonium hydrogensulfate mixture 285
Mixed complexes, of copper oxalate with amines, thermal decomposition 264
Modification transformation of ammonium nitrate, DTA 37
Monolayers, mixed, of hydrocarbon and alcohol 293

Nickel oxide–vanadium pentoxide catalysts, reduction kinetics of 77
Nickel(II) mixed rhodanide–pyridine complexes, thermal decomposition 359
Non-isothermal destruction processes, applicability of kinetic equations for 325

Peat, thermal and group analysis of 439
Perlites, study by modified DTG 341
Phase equilibria in calcium nitrate–water system, study by quasi-isothermal–quasi isobaric TG 419
– transition, of ammonium sulfate–ammonium hydrogensulfate mixture 285
Polyethylene, oxidative stability of, by DTA 430
Poly(acid amides), complexes with aprotic solvents, MTA 333
Poly(isobuthylene), study with factor-jump thermogravimetry 379
Polymers containing fire retardants, DTA, DSC studies, review 159
Polyurethane elastomers, thermal decomposition 367
Potassium nitrate, evaporation rate, temperature dependence of 404
–, nitrite, evaporation rate, temperature dependence of 405
Propylene, temperature programmed desorption of 394
Protein from lobster shell, DTA, DTG, TG 259

Quasi-isothermal TG, for dehydration of calcium nitrate tetrahydrate 409, 410

Reactor calorimeter, for measurement of rate of heat evolution 215
Reduction kinetics of mixed nickel oxide–vanadium pentoxide catalysts 77
Reference material, role of, in DTA 113
Renium heptoxide–aluminium oxide catalyst, desorption of propylene from 397
Reproducibility of DTA peak with ammonium nitrate 37
Review on applications of thermal analysis 427
– on DTA and DSC studies on polymers containing fire retardants 159
– on thermodynamics as help to science and technology 201

Sample size, effect on rate constant in thermal analysis 443
Scanning electron microscopy of aluminium foils for capacitors 318
Sedatives, thermal study of 57
Silica gel surface, mixed monolayers on, DTA 296
– -sodium nitrate–diboron trioxide mixtures, reactions of 103
Sodium nitrate–diboron trioxide–silica mixtures, reactions of 103
– –, evaporation rate, temperature dependence of 403
– nitrite, evaporation rate, temperature dependence of 405
Standard test methods for thermal analysis 428

Temperature programmed desorption curves of water and ammonia on zeolites 355
Thallium oxalates, calculation of activation energies of 155
Theory of DTA 301
Thermal analysis of peat 439
– – of lobster shell 257
– decomposition, of ammonium paramolybdate 125
– –, of copper oxalate mixed complexes 271
– –, of nickel(II) mixed rhodanide–pyridine complexes 359
– –, of polyurethane elastomers, containing antipyrene 367
– – of sedatives 57
– degradation of poly(isobuthylene) 379
– ignition of ammonium perchlorate, effect of fuel-rich compounds 43
– – of two-component systems, description of DTA curves 52
– oxidability and surface area of aluminium foils 318
– reaction of uranyl acetate dihydrate–thiourea mixtures 144
– transformations of acrylonitrile copolymer with methylthiirane 307
– –, kinetics of, improving the functions 151
Thermogravimetry of aluminium foils for electrolytic capacitors 315
– of ammonium paramolybdate 130
– of calcium nitrate tetrahydrate 410
– of cobalt(II) cyanopyridine complexes 5
– of copper oxalate hemihydrate 266
– of crude oil 20
– of graphite–manganese oxide catalysts 72
– of lobster shell 258
– of nickel(II) rhodanide–pyridine mixed complexes 361
– of peat 441
– of polyurethane elastomers 370
– of sedatives 61
– of sodium nitrate–diboron trioxide mixture 106
– – – – – – silica mixtures 110
Thermokinetic reactor for measurement of rate of heat evolution 215
Thin layer chromatography, of thermal decomposition products of sedatives 60
Thiourea–uranyl acetate dihydrate system, thermal decomposition 139
Transition enthalpy, of elastin–fatty acid complexes 290
Trimipramine maleate, thermal behaviour 57

Uranyl acetate dihydrate–thiourea system, thermal decomposition 139

Vanadium pentoxide–nickel oxide catalysts, reduction kinetics of 77

Wolfram trioxide–silicium dioxide catalyst, decomposition of propylene from 394

X-ray diffraction of copper oxalate ethylamine complex 269
– – of products of reaction of sodium nitrate–diboron trioxide mixtures 107

Zeolites, deammoniation, under hyperbolic temperature programme 353
